

# Department of Environmental Quality Land Quality Division

## Title II Sites Panel

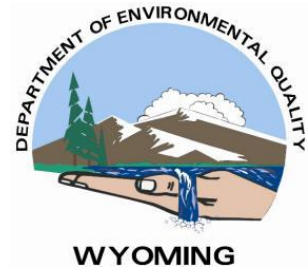

### National Mining Association

**July 28,2020**

Ryan Schierman, Program Manager WYDEQ/LQD

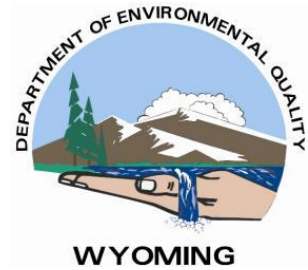

# Topics of Discussion

- ▶ MOU Between NRC/WDEQ
- ▶ Conventional Title II Sites
  - Western Nuclear Corporation Split Rock
    - Working on Final CRR and final site inspection
  - Anadarko Split Rock
    - Developing CRR
    - Surface/Mineral Rights
  - Lucky Mc
    - Groundwater concerns.
  - Umetco Gas Hills
    - Additional groundwater monitoring and modeling. New ACL application
  - Exxon Mobil Highland
    - ACL, inclusion of pit lake in the long term care boundary transferred to the DOE

# Topics of Discussion

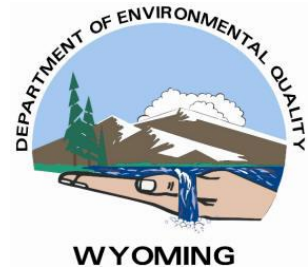

## ▶ Completion Review Report for ISR Operations

- Partial Site Termination (Wellfields)
  - SA-900 For partial terminations, documentation that release of a portion of the site will not negatively impact the remainder of the site to be closed at a later date. Such documentation could be a statement from the appropriate State regulatory agency which confirms that the impact of releasing a portion of the site has been evaluated and includes the bases for the State's conclusion.
- |

## SA 900

- ▶ NRC's staff should not duplicate the State's review or conduct an independent detailed technical review of the proposed license termination....Rather the NRC staff should examine wither the CRR has documented the State staff's bases in summary form for its conclusion that all applicable standards and requirements have been met.
  - This needs to continue to be the focus of NRC's review of State's CRR
- ▶ Guidance needs to discuss surface/mineral ownership. Demonstration of good faith effort.
- ▶ CRR approval prior to Long Term Surveillance Plan approval—may cause conflict.
